

## **PHYSICAL EXAMINATIONS AND IMMUNIZATIONS FOR STUDENTS**

**Procedures regarding physical examinations of students, including immunizations, health inspections for student employees, and basic physical testing, shall be established in compliance with state statutes.**

**To comply with state statutes and regulations, every pupil shall present evidence of compliance with state immunization and health assessment statutes upon enrollment in school. Any pupil who does not present evidence of compliance with state law will be allowed to enroll or continue in school attendance only with authorization from the building principal and/or the coordinator of nursing services. The building administrator or other licensed employee designated by the building administrator may exclude any pupil from school attendance for noncompliance with the law. No pupil shall be allowed to continue in school attendance for more than thirty school days if evidence of compliance with these statutes is not provided.**

**Any student who has not presented evidence of immunization shall be excluded from school for any period of contagion if there is an outbreak of a disease for which the student has not been vaccinated. When a student is excluded from school based on noncompliance with state law, the building administrator shall notify the parent or guardian of the involved pupil in writing of the reason for the exclusion from school attendance and of the fact that the pupil may continue to be excluded until the pupil has complied with the statutory requirements. The notice shall also provide the parent or guardian with information on where the vaccinations can be obtained and inform the parent or guardian that a hearing on the matter will be afforded the parent or guardian upon request.**
